

Introduction

KRYPTON believes that amazing things can be accomplished by diverse teams of talented individuals. So, we are looking for some talented people to join our team.

Requirements

- Graduates/Masters and/or 4-6 years of professional experience in information security and related functions
- Experience in performing IT security reviews including vulnerability assessment, Penetration testing
- Demonstrable knowledge and experience of security risk analysis for technical solutions
- Proficiency in manually testing for application security specific vulnerabilities such as those included in the OWASP Top 10 (SQL Injection, Cross-site Scripting, etc.)
- Proficiency in use of testing tools (e.g. Burp, etc.)
- Excellent knowledge of information security technologies and methodologies particularly, including web server security, firewalls, networks, encryption, PKI on UNIX and Windows platforms
- Knowledge in one or more scripting language like perl, python, bash and one or more programming languages such as C, C++ and Java
- Knowledge of information security standards such as: ISO 27001, PCI DSS, COBIT
- Proficient in Microsoft Office suite applications, ability to write technical reports, detailed presentations and documentation
- Ability to communicate technical risk issues effectively, to customers who may, at times, have a non-technical background
- Demonstrated understanding of the importance of business ethics
- Must be able to handle highly confidential information in a strictly professional manner
- Open to travel as per the job requirements
- Malware analysis experience and secure code reviews is desirable
- Professional certifications and public presentation skills would be a plus
- Full command of English is a must – Arabic and French languages would be a plus

Responsibilities

Our Security Consultants are materially involved in the complete professional services lifecycle, from pre-sales through delivery. You perform risk analysis reviews on proposed systems and solutions:

- Support pre-sales and proposal development
- Plan and execute a customer engagement
- Plan and execute a vulnerability scan and/or penetration test
- Deliver project status and post-test reports
- Create real-world scenarios where you attempt to compromise systems, applications, and mobile security
- Review and define requirements for information security solutions
- Perform security reviews of application designs, source code and deployments as required, covering all types of applications (web application, web services, mobile applications, thick client applications, SaaS), as required
- Support in the delivery of PCI DSS compliance, including PCI-compliant penetration testing
- Assess and understand the risks and the potential impact they pose to client's business
- Work on improvements for provided security services, including the continuous enhancement of existing methodology material and supporting assets
- Evaluates highly complex security systems according to industry best practices to safeguard internal information systems and databases
- Designs training materials for computer security education and awareness programs
- Develop Promote security awareness and adherence to policy, process and standards

Other information
